

CARBON DIOXIDE SYSTEM COMPONENTS

DESCRIPTION

The odorizer is used to inject a small amount of wintergreen scent into the carbon dioxide while flowing through the piping network. When the carbon dioxide discharges into the hazard area, it will carry a scent of wintergreen with it. This wintergreen scent is a warning to personnel entering the hazard area that the area contains a concentration of carbon dioxide and precautions must be taken, either leave the area immediately or secure proper breathing apparatus. The internal ampoule containing the oil of wintergreen in the odorizer must be replaced after each system discharge.

SPECIFICATIONS

Material: Steel
Thread Size/Type: 1 in. NPT Male

APPROVALS

- U.S. Coast Guard (162.038/7/0)
- UL (EX-2968)
- FM Approved
